### Formwork Specifications

Formworks for concrete shall be supplied from best quality and durable materials of sufficient strength to withstand the full loads and side pressures from freshly placed concrete, together with construction traffic and necessary equipment. Furthermore, it should ensure that there is no deflection when concrete is placed, and maximum limit for deflection is  $\text{span}/360$ . The supplied formwork shall conform to the shapes, lines and dimensions of structures indicated in the BOQ. Where the concrete finished surface is exposed, the formwork shall be of good quality and free of gaps. The dimensions of the supplied formwork panels should be as indicated in the BOQ.
